Documents cited in the International Search Report:

D1: US 2002156815 A1

D2: WO 0193097 A2

D3: US 2002065851 A1

The cited document represents the general state of the art.

The invention defined in claims 1-5 is not disclosed by this document.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed method for establishing and conducting communication between a data source and a user. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-5 is novel and is considered to involve an inventive step. The invention is industrially applicable.

Revised claims

1. A method of establishing and carrying out communication between a data source and a user, where said communication is effected via a fixed or a mobile network, characterised in by placing a program that handles said presentation to the user in the user's own terminal which, in turn, is connected, via a server, to a data source that contains data; and in that the terminal handles data to and from the server such that when receiving information from a user the program clears this information from the layout and protocol and sends to the server and further to the data source solely interaction data, and, on the other hand, when receiving data from the data source places this data in a correct protocol for presentation to the user in the right presentation form and with the correct user layout.

2. A method according to Claim 1, characterised in that the presentation handling program is independent of the application used by the user.

3. A method according to any one of the preceding Claims, characterised in that the program in the terminal also includes a dialogue facility which enables the facility to handle inputs from the user and to respond to the user without reverting back to the data source.

4. A method according to Claim 1, 2 or 3, characterised in that the program is downloaded into the terminal from the server on its first time of use.

5. A method according to Claim 1, 2 or 3, characterised in that when the program has been updated in the server, the updated program is downloaded from the server
